# Calendar Planner Documentation

When running the eclipse project the browser show the below page.

In the top of the calendar there are few controllers

This controller is used to move between the months

This controller is used to move to the date of today

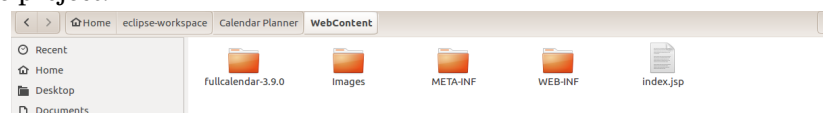

This controller is used to move between the years

Clicking in any calendar date will pop-up and add event form

In order to add an image to the event you must add the image in the folder named Images under the webContent in the project.

You can't use the following characters in the title and the description ~ < >

Clicking over an event will popup an update event form

In the update event form you can update the event information or delete the event.

Hovering over an event will show the events details

if you faced any broken image like the below picture just refresh the project in the eclipse (shortcut F5)
